\* d max con sede chiavetta DIN 6885/3

\*\* Disponibile fino alla grandezza 65 in esecuzione "STANDARD", da grandezza 80 a 200 in esecuzione MRF - "MODULAR".

① Gioco angolare fra entrata e uscita tendente a zero

② SAFEGUARD - Si reinserisce automaticamente in posizione angolare casuale quando il sovraccarico è rimosso. Per velocità medio-alte.

SAFEGUARD R - per coppie alte e velocità basse.

③ SYNCHRON Si reinserisce automaticamente in posizione fissa ogni 360°.

Per velocità medie.

④ SAFE LIFTING - In caso di sovraccarico l'interruttore fornisce un segnale senza interrompere la trasmissione di coppia. Per velocità molto alte.

⑤ ROTA FREE - In caso di sovraccarico entrata e uscita si sganciano e l'uscita rallenta folle. Per velocità molto alte. Reinserimento manuale.

\* d max with keyway seat according to DIN 6885/3

\*\* Available up to the size 65 in the shape "STANDARD", from the size 80 up to 200 in the shape MRF - "MODULAR".

① Angular backlash between input and output close to zero.

② SAFEGUARD - Re-engage automatically in a random angular position when the overload is removed. For medium-high speed.

SAFEGUARD R for high torque - low speed.

③ SYNCHRON - Re-engage automatically after 360° in the same angular position every time. For medium speed.

④ SAFE LIFTING - In case of overload the switch give a signal without interruption of the torque transmission. For very high speed.

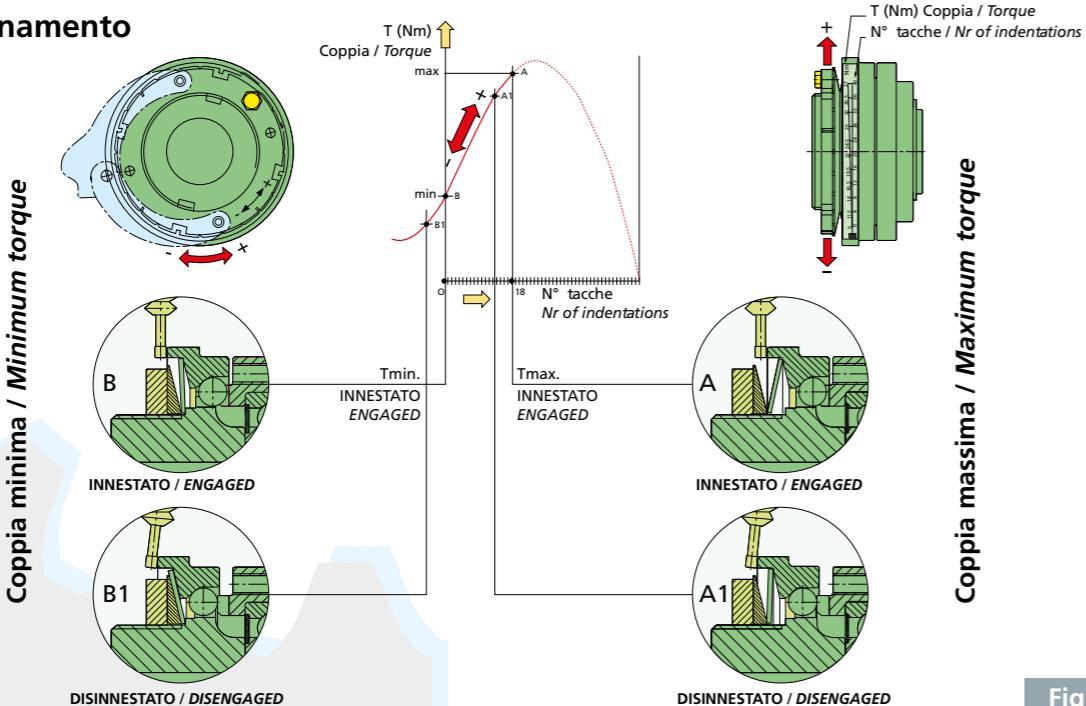

⑤ ROTA FREE - In case of overload input and output are disconnected and output slow down idle. For very high speeds. Manual re-engagement.

## ZBC - NBC (Limitatori di coppia a gioco zero / Zero backlash torque limiters)

### Principio di funzionamento

#### How it works

## ZBC (Servizio pesante / Heavy duty) - NBC (Servizio leggero / Light duty)

### Il vantaggio del sistema, confrontato con i tipi tradizionali

- Limitatori di coppia a gioco angolare tendente a zero
- ZBC è la serie per il servizio pesante, NBC è la serie per il servizio leggero
- Momenti di inerzia più bassi, dimensioni e pesi ridotti
- Durata di vita più lunga, usura ridotta

### The advantages of the system, compared to the traditional types

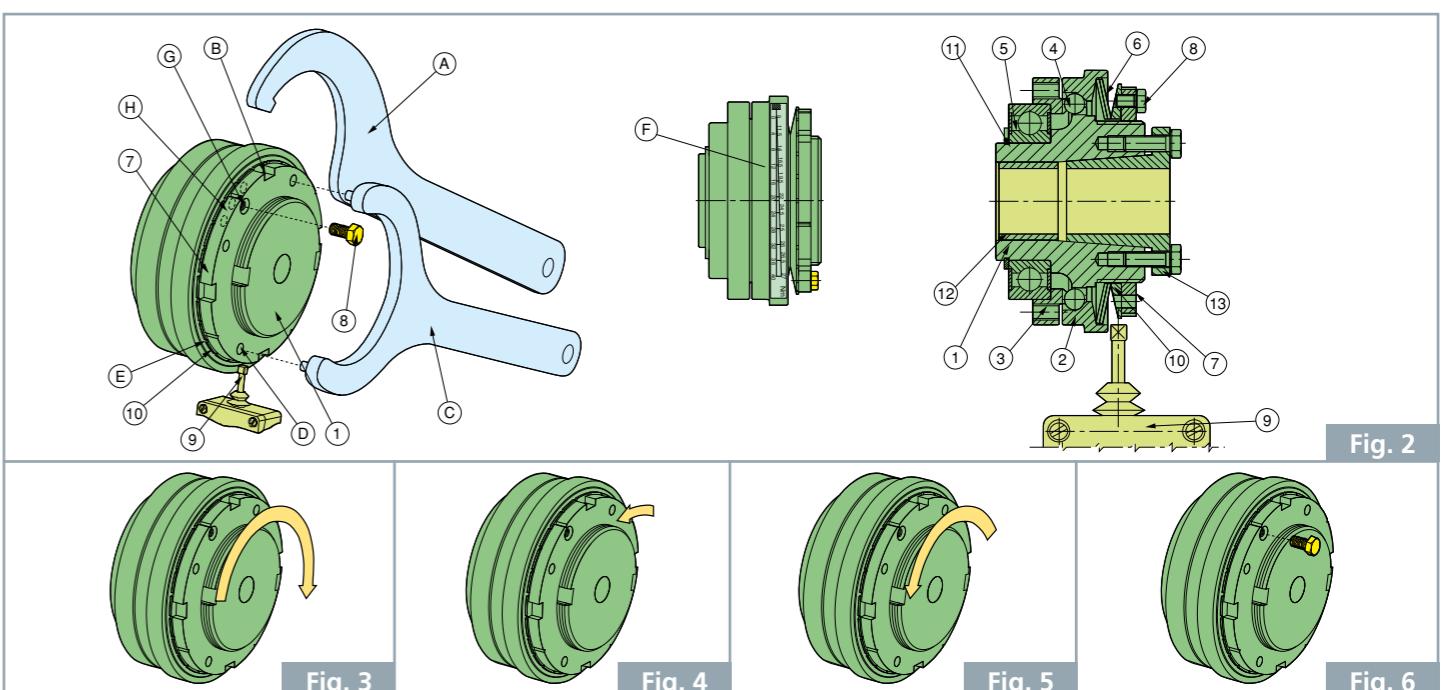

- Torque limiters with backlash close to zero
- ZBC is the heavy duty serie, NBC is the light duty serie
- Lower moment of inertia, reduced dimensions and weight
- Longer lifetime, reduced wear

### How they work

During normal operations the ZBC - NBC torque limiter (fig.2) transmits the torque from the hub (1) to the flange (3) through a ball crown (4) forced by the pressure of the disc springs (6) on the moving flange (2) into the seats on the two parts (1) and (3). In case of overload, when the torque demand exceeds the pre-set value, both the parts (1) and (3) are disengaged and they transmit only a small residual torque: the balls are pressed out of the indentations of the flange (3), thus pushing the moving part (2) axially against the force of the disc springs (6), and activating the emergency stop switch of the motor (9). The re-engagement is automatic at the pre-set torque when the torque demand drops. The SYNCHRON type re-engages during stoppage or at low speed once per revolution at a reference point and keep the hub (1) and the flange (3) of the torque limiter synchronised. The disc springs are working only in the negative area of their characteristics (fig.1), so the adjustment nut (7), when tightened anticlockwise, provides an increasing axial load to the disc springs (6) and a higher disengaging torque: when the pre-set torque level is reached the nut (7) is locked in position by means of the locking screw (8). ZBC holds 8 fixing threaded holes and a heavy duty bearing, NBC 6 fixing threaded holes and a light duty bearing.

### Torque adjustment

ZBC must be adjusted according with the ZBC setting torque chart, if there is not a factory torque set request. Insert wrench (A) into the seats (B) or the wrench (C) into the holes (D) and turn the nut clockwise up to the end of the stroke (fig.3). Then go back anticlockwise (fig.4) for only one indent (E) to avoid the blocking between the disc springs (6) and the hub (1): this is the "zero indent", corresponding to the minimum torque. Starting from the "zero indent", turn the nut anticlockwise (fig.5) for a number of indents (E) corresponding to the requested disengagement torque, according to the diagram on the label (F) on the outer diameter of the ZBC - NBC torque limiter. Put soft Loctite on the securing screw (8) and tighten it (fig.6) in the threaded hole (G) of the nut (7), in correspondence to one of the holes (H) on the locking washer (10).

# ZBC - SAFEGUARD - SYNCHRON

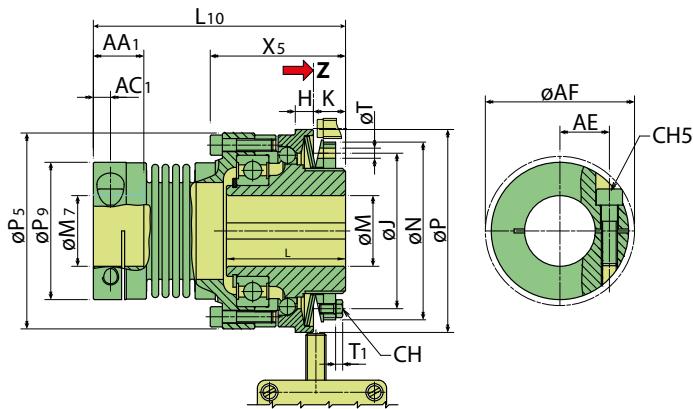

## Tipo / Type U - Z

Con giunto a soffietto - alta rigidità torsionale, bassa inerzia  
With bellow coupling - high torsional stiffness, low inertia

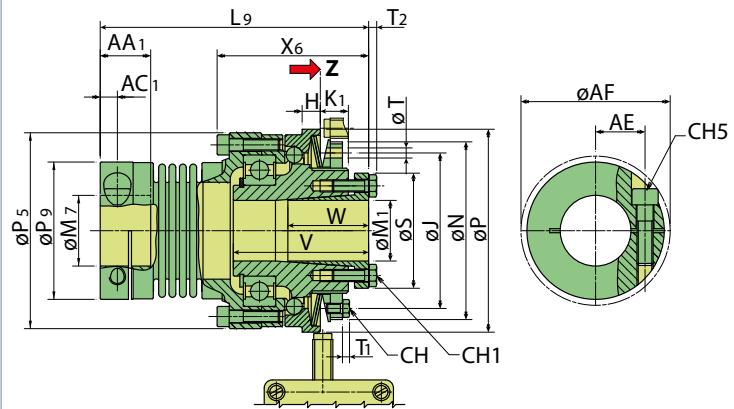

### Tipo / Type U

lato limitatore con foro e chiavetta, lato giunto con morsetto  
torque limiter side with bore and keyway, coupling side with clamping hub

### Tipo / Type Z

lato limitatore con calettatore, lato giunto con morsetto  
torque limiter side with clamping element, coupling side with clamping hub
